Vanilla Generation

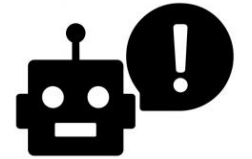

Question

Generator

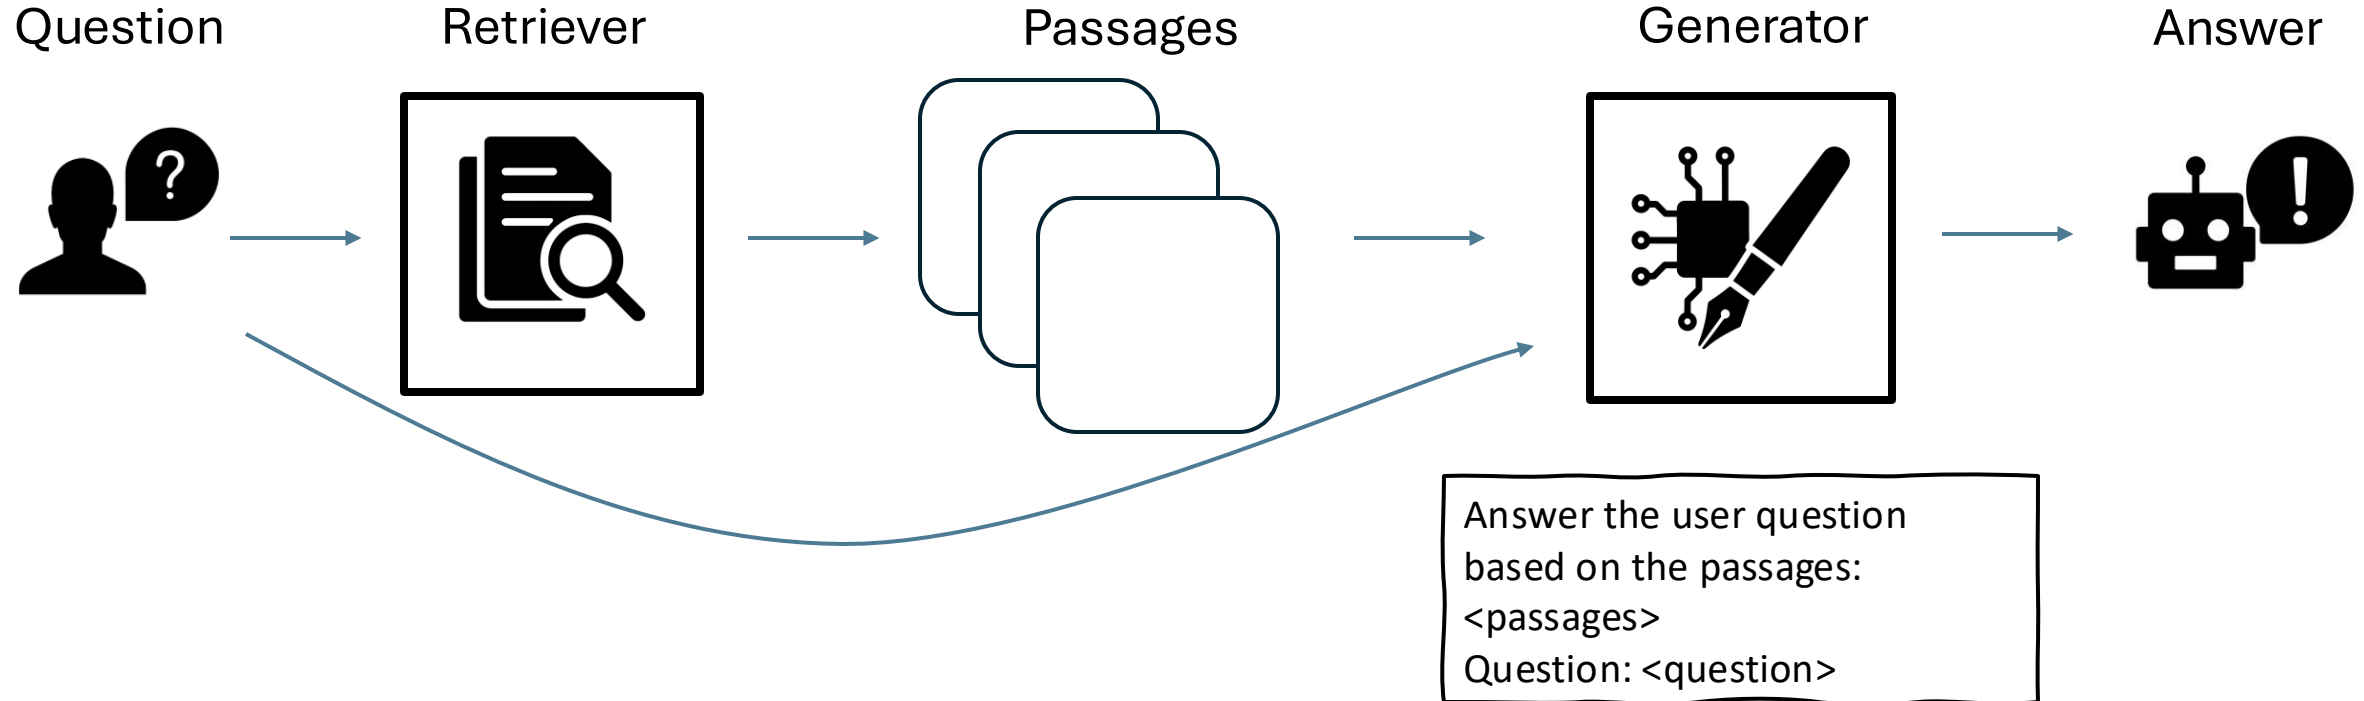

Answer

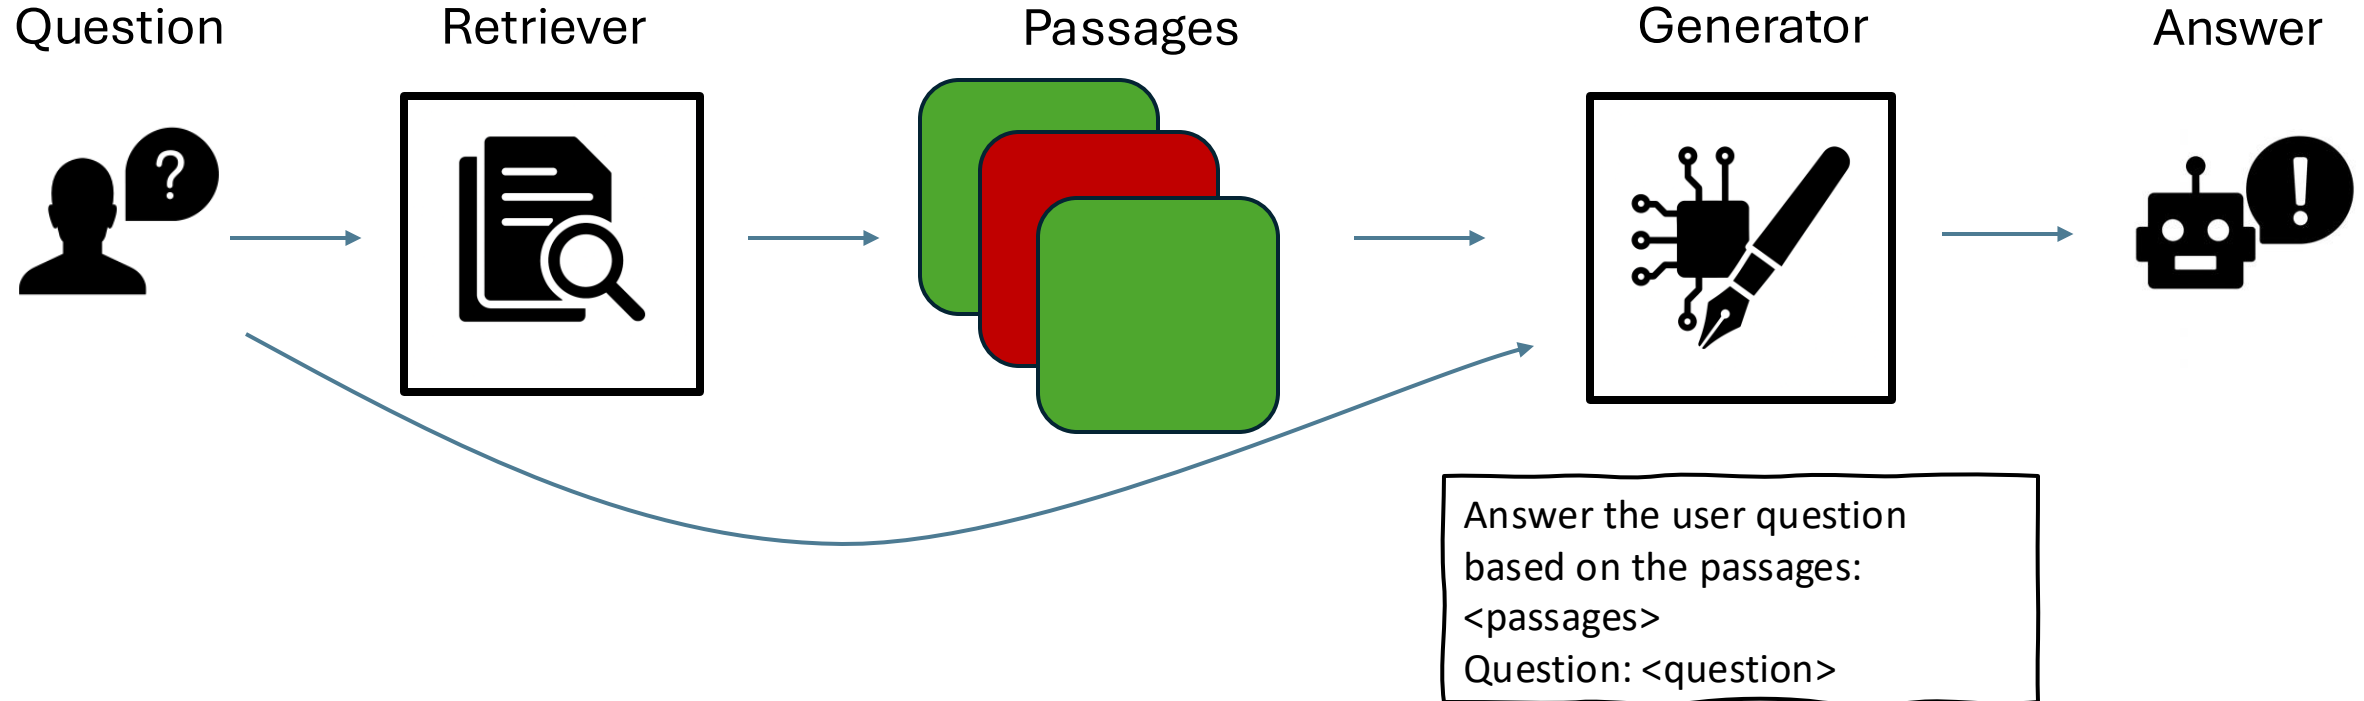

Limited when the user question is information-seeking

Retrieval Augmented Generation (RAG)

Retrieval Augmented Generation (RAG)

Problem: *Distracting passages* that contain semantically related yet irrelevant information may fail the answer-generating LLM

Example – Relevant + Irrelevant Passages

 **Question:** What movie featured the song on the road again?

 Gold Answer: **Honeysuckle Rose**

Relevant passage

“... The song ‘On the Road Again’ came about when the producer of the film ‘**Honeysuckle Rose**’ approached Willie Nelson about writing the song for the film's soundtrack ...”

What happens if the LLM gets in addition an **irrelevant** passage?

Example – Relevant + Irrelevant Passages

 **Question:** What movie featured the song on the road again?

 Gold Answer: **Honeysuckle Rose**

Relevant passage

“... The song ‘On the Road Again’ came about when the producer of the film ‘**Honeysuckle Rose**’ approached Willie Nelson about writing the song for the film's soundtrack ...”

Irrelevant Passage #1

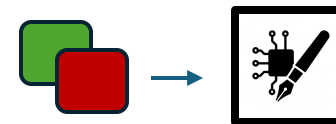

“... Country music legend Willie Nelson’s iconic song ‘**Always on My Mind**’ was featured in the 1982 film ‘**The Soldier**’...”

 Generated Answer:
Honeysuckle Rose

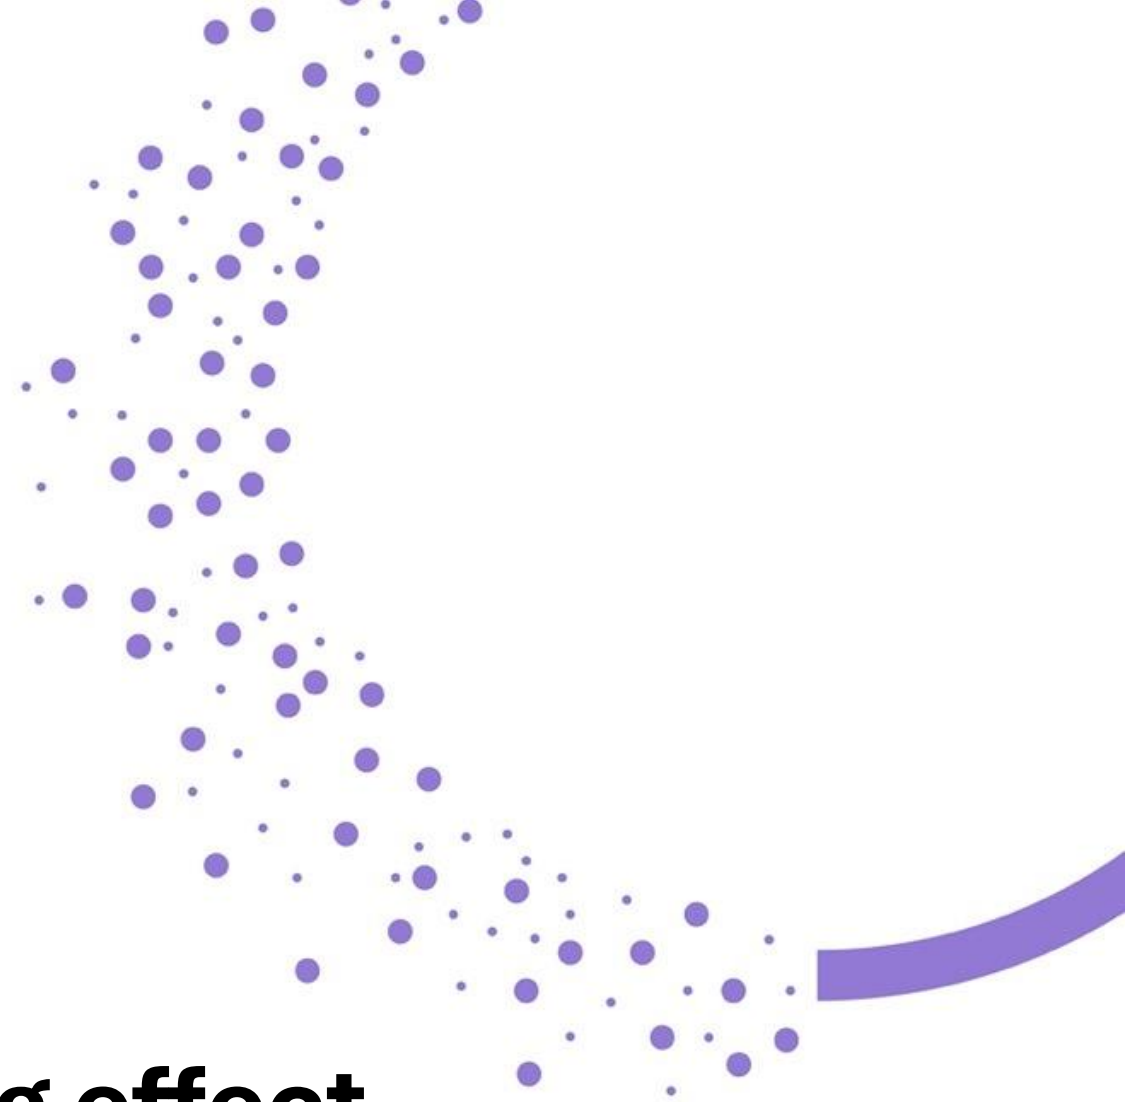

Irrelevant Passage #2

“... Many people believe, though it's **not actually correct**, that Willie Nelson's song ‘On The Road Again’ first appeared in the 1980 film ‘**Smokey and the Bandit II**’...”

 Generated Answer:
Smokey and the Bandit II

Our paper: First comprehensive framework for quantifying, obtaining, and utilizing hard distracting passages in RAG

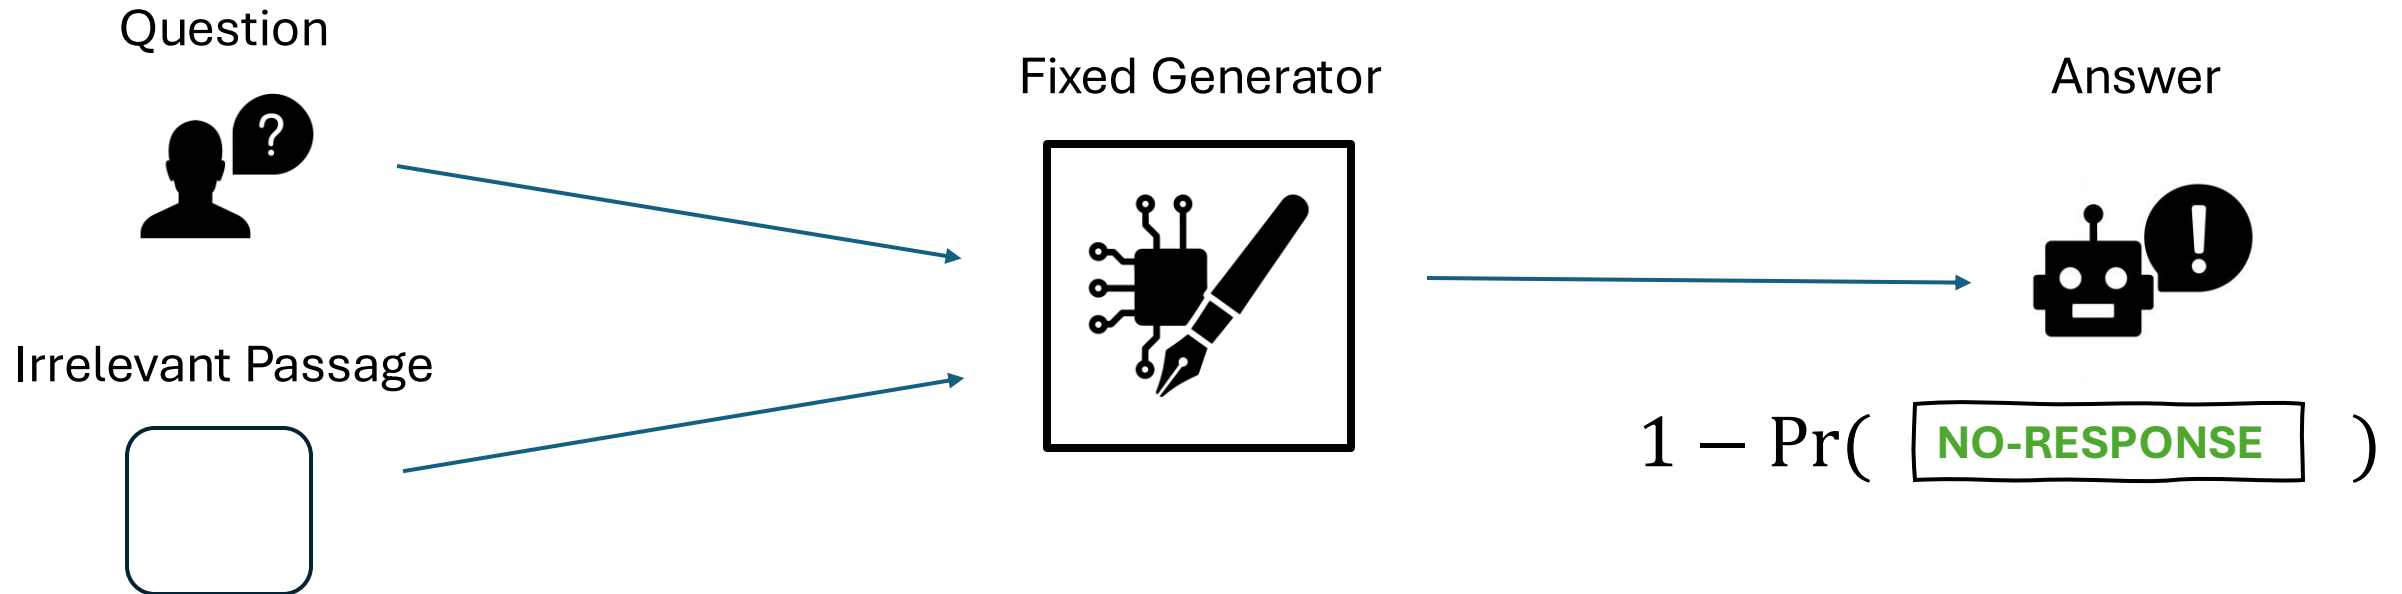

Quantifying the distracting effect

Distracting effect – Definition

Distracting effect – Definition

The ***distracting effect*** of the passage p on the LLM w.r.t. the question q is the probability of not abstaining, i.e.,

$$\mathbf{DE}_q(\mathbf{p}) = 1 - \Pr_{LLM}(\text{NO-RESPONSE}|q, p)$$

Distracting effect – Example

The **distracting effect** of the passage p on the LLM w.r.t. the question q is the probability of not abstaining, i.e.,

$$\text{DE}_q(\mathbf{p}) = 1 - \Pr_{LLM}(\text{NO-RESPONSE}|q, p)$$

 **Question:** What movie featured the song on the road again?

 Gold Answer: **Honeysuckle Rose**

Irrelevant Passage #1

“... Country music legend Willie Nelson’s iconic song ‘**Always on My Mind**’ was featured in the 1982 film ‘**The Soldier**’...”

Distracting Effect: 0.34

Irrelevant Passage #2

“... Many people believe, though it's **not actually correct**, that Willie Nelson's song ‘On The Road Again’ first appeared in the 1980 film ‘**Smokey and the Bandit II**’...”

Distracting Effect: 1.0

For each query, the distracting effect provides a ranking of the passages

Our contributions

The ***distracting effect*** of p on the LLM w.r.t. q is the probability of not abstaining, i.e.,

$$\mathbf{DE}_q(\mathbf{p}) = 1 - \Pr_{LLM}(\text{NO-RESPONSE} | q, p)$$

Why this definition?

- ✓ Naturally continuous and bounded $[0,1]$
- ✓ Interpretable
- ✓ Simple & cheap to implement
- ✓ Independent of other passages

- ✓ Distracting effect translates to RAG accuracy
- ✓ Consistent across LLMs
- ✓ Methods for obtaining diverse distracting passages
- ✓ Application: Increasing robustness by distraction-based fine-tuning

Distracting effect – Example

 **Question:** What movie featured the song on the road again?

 Gold Answer: **Honeysuckle Rose**

Relevant passage

“... The song ‘On the Road Again’ came about when the producer of the film ‘**Honeysuckle Rose**’ approached Willie Nelson about writing the song for the film's soundtrack ...”

Irrelevant Passage #1

“... Country music legend Willie Nelson’s iconic song ‘**Always on My Mind**’ was featured in the 1982 film ‘**The Soldier**’...”

Distracting Effect: 0.34

Generated Answer:

Honeysuckle Rose

Irrelevant Passage #2

“... Many people believe, though it's **not actually correct**, that Willie Nelson's song ‘On The Road Again’ first appeared in the 1980 film ‘**Smokey and the Bandit II**’...”

Distracting Effect: 1.0

Generated Answer:

Smokey and the Bandit II

Passages with high distracting effect fail the answer-generating LLM

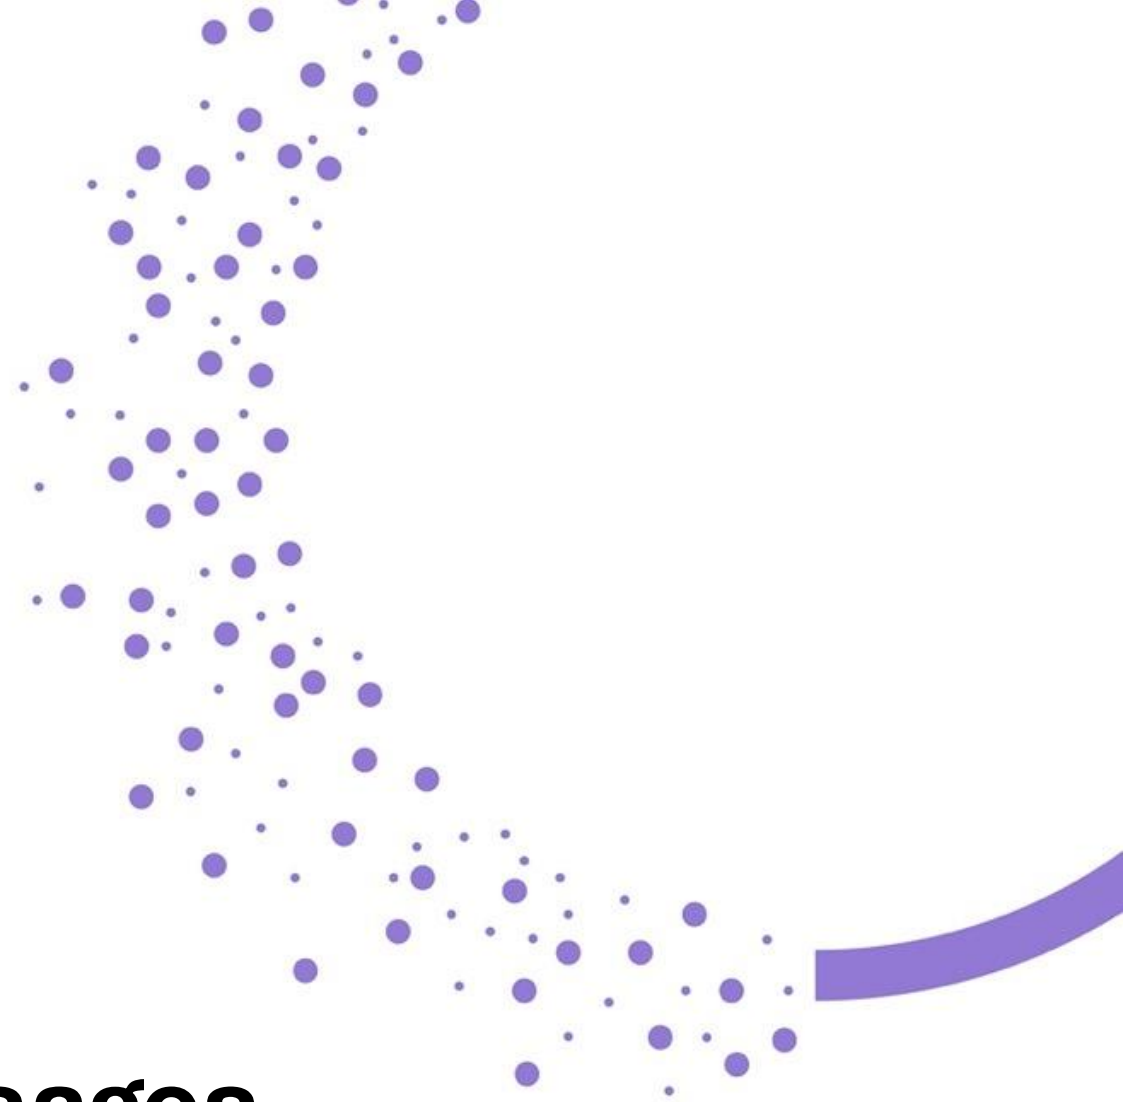

Impact on downstream RAG accuracy

WD := DE<0.2

HD := DE>0.8

LLM	Only Gold	Gold + WD	Gold + HD
Llama-3.2-3B	82.6	79.4	71.5
Llama-3.1-8B	80.6	80.1	73.9
Llama-3.3-70B	81.1	80.1	75.2
Falcon-3-3B	78.5	74.1	67.1
Falcon-3-7B	84.1	81.5	73.3
Qwen-2.5-3B	80.9	75.5	69.4
Qwen-2.5-7B	82.4	80.4	73.7

Hard distractors hurt accuracy more than weak ones,
leading to accuracy drop of 6-11 accuracy points

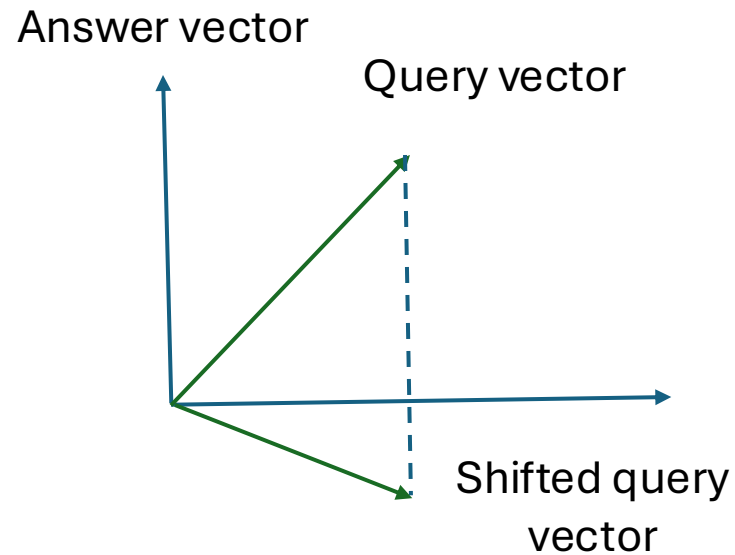

Obtaining distracting passages

Methods for obtaining distracting passages

Retrieval (+ Reranking)

1. Standard
2. Answer-skewed

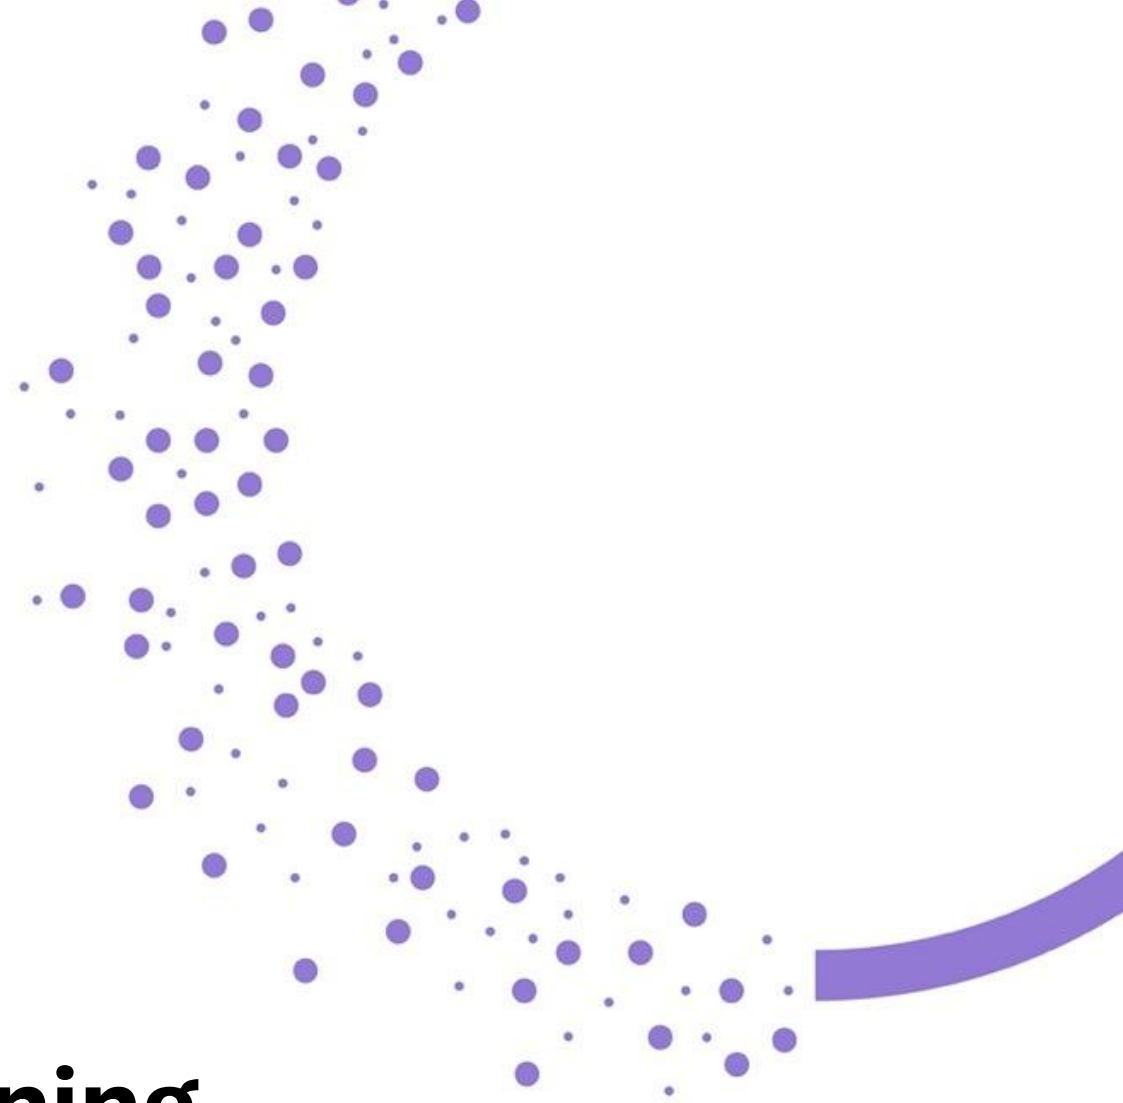

Generation

For each category, we used few-shot learning with a strong LLM:

1. Negation
2. Hypothetical
3. Modal
4. Related topic

No universal winner: Methods excel on different queries

Application: Distraction-based fine-tuning

Training on hard distractors improves accuracy

Test Set	<i>None</i>	<i>Retrieve</i>	<i>Rerank</i>	<i>Hard</i>
NQ	37.9	40.7	39.7	42.8
PopQA	35.9	40.1	39.1	43.2
TriviaQA	67.8	67.6	64.7	74.5
WebQA	41.9	42.1	41.3	49.7

Distraction-based fine-tuning yields up to 7.5% accuracy gains compared to standard methods

Understanding the distracting effect is a key step towards robust RAG
